

x_make_yahw_x “ Production Ledger

I document every change to this intake canary here. Entries follow [Keep a Changelog](#) and Semantic Versioning so even the smallest harness remains accountable.

[Unreleased]

Documentation

- Recorded the 2025-11-09 Environment Studio smoke run (`yahw_smoke` plan) and evidence locations in the operator README.

[0.20.7] - 2025-11-12

Fixed

- Hardened the demo astral snapshot emission so smoke runs only write projections when the orchestrator run directory exists and silently swallow only expected I/O failures.

[0.20.6] - 2025-11-12

Changed

- Normalized metadata note aggregation to accept any sequence input while guarding against accidental string concatenation.
- Adopted the shared repo hygiene `.gitignore` so automation detritus and build artefacts stay out of version control.

[0.20.5] - 2025-11-11

Changed

- Expanded the MyPy search path to cover neighbouring shared packages, keeping the astral gateway contract under type-check enforcement.
- Reformatted the smoke plan matcher for readability before hook expansion.

[0.20.4] - 2025-10-15

Changed

- README updated for the Road to 0.20.4 release, documenting the Kanban intake checks and exporter smoke tests this harness now performs.
- Control notes refreshed to remind operators to capture greeting run evidence in `make_all_summary.json` before lighting heavier pipelines.

[0.20.3] - 2025-10-14

Changed

- README refreshed to note the Road to 0.20.3 audit capture baked into the harness runs.

[0.20.2] - 2025-10-14

Changed

- Updated the documentation to mark the Road to 0.20.2 checkpoint and reinforce the baseline verification role of this harness.

[0.20.1] - 2025-10-13

Changed

- Updated README references to the Road to 0.20.1 release hub and proposal so the hello-world harness mirrors the active milestone.

[0.20.0-prep] - 2025-10-12

Added

- Authored a control-room themed README and changelog to align the hello-world harness with the Road to 0.20.0 playbook.
- Linked the repo to orchestration, compliance, and change-control channels so it stays in the loop.

Changed

- Clarified that future expansions must be justified and documentedâ€”this harness sets the tone for every other project.
